Career Summary

Software Engineer with completed BSc coursework (available immediately), specializing in production-ready **MERN** stack applications. Proven ability to architect and deploy full-stack systems using **React**, **Node.js/Express**, and **MongoDB**, featuring role-based access control, REST APIs, and third-party integrations. Seeking an **Internship or Junior Full-Stack/Backend Engineer** role to ship secure, maintainable features and drive immediate technical value.

Key Skills

Languages: JavaScript, Python, Java, C/C++

Frontend Frameworks & Libraries: React, Redux Toolkit, Tailwind CSS, Vite

Backend & Databases: Node.js, Express.js, MongoDB, Mongoose

Tools & DevOps: Git/GitHub, Docker, GitHub Actions, Vercel, Render, Postman

APIs & Integrations: REST APIs, JWT Authentication, Stripe API, Google Maps API, Nodemailer, Multer

Pet Shop Management System

Full-Stack Developer

 [GitHub](#) —  [Live Website](#)

- Architected a secure operations platform with role-based access control (Admin/Staff), featuring Admin-only staff account management and a robust Express.js middleware layer with JWT verification, bcrypt password hashing, and centralized error handling.
- Built a dynamic analytics dashboard with real-time tracking across pets, customers, orders, and appointments, powered by Recharts for data visualization and Nodemailer for automated email notifications.
- Established a multi-stage CI/CD pipeline using GitHub Actions (3 workflows: CI, Code Quality, Docker Publish) and Docker containerization, deployed to Vercel (React + Vite) and Render (Express/MongoDB).

Personal Portfolio Website

Full-Stack Developer

 [GitHub](#) —  [Live Website](#)

- Architected a full-stack portfolio platform using React 19 (Vite) with TailwindCSS 4 and Framer Motion for animated UI, backed by an Express.js REST API with JWT authentication and bcryptjs-secured admin access for content management.
- Built a dynamic project management system with full CRUD capabilities, enabling admin-controlled portfolio updates through a protected dashboard, with MongoDB (Mongoose) as the persistent data layer.
- Deployed a decoupled architecture with the React frontend on Vercel and the Node.js/Express backend on Render, featuring CORS-configured cross-origin communication and environment-based configuration management.

Real Estate Management System

Full-Stack Developer

 [GitHub](#) —  [Live Website](#)

- Engineered a multi-role MERN marketplace (Buyer, Seller, Admin) with JWT authentication, bcrypt password hashing, a role-based middleware layer, and a security audit log that records unauthorized access attempts with IP tracking.
- Implemented an end-to-end content moderation pipeline where Sellers submit listings awaiting Admin approval, and Buyers submit star-rated reviews pending Admin moderation— with an Admin Control Panel for user management (view, delete buyers/sellers) and a Forgot/Reset Password email flow via Nodemailer.
- Built property detail pages featuring interactive map integration for location-based viewing, a dual-mode inquiry system (direct message or appointment scheduling), Cloudinary image uploads, and a Redux Toolkit + Framer Motion animated UI, deployed with a decoupled architecture on Vercel (React/Vite) and Render (Express/MongoDB).

Vehicle Management System

Full-Stack Developer

 [GitHub](#) —  [Live Website](#)

- Integrated Google Maps and Google Weather APIs to provide real-time locational context and environmental data for fleet tracking.
- Implemented secure payment processing via Stripe API and engineered an automated PDF generation system for instant billing and reporting.

Achievements & Competitions

- **ICPC Dhaka Regional Preliminary Contest (2024):** Competed in rigorous algorithmic programming and data structure problem-solving.
- **Solvio AI Hackathon (2025):** Advanced to Phase 2 .

Education

BSc in Computer Science & Engineering

International University of Business Agriculture and Technology (IUBAT)

2022 – 2026

CGPA: 3.24

Last updated: February 24, 2026
